1. Field of the Invention The invention is in the field of methods and apparatus for removing sulfur from a liquefied petroleum gas (LPG) stream.
2. Description of the Prior Art There has been a continuous need for improving the desulfurization of LPG streams since their widespread commercial use in the 1940's. When LPG is compressed for storage or shipment in bulk, desulfurization is usually done in a large LPG processor, known as a 'sender' unit, where the entire crude feed may be treated. A problem with LPGs with high sulfur, such as ethane and propane, is that the sulfur released during the desulfurization process, at an elevated temperature, usually in the range of 430.degree. F., and commonly with a basic earth acid catalyst will react with the catalyst to produce solid impurities that form an undesired gray layer on the surface of the catalyst. The above-noted 'sender' desulfurization problem is referred to as catalysis induced sulfur plugging. There is a continuing need for an apparatus and method of desulfurizing LPG that minimizes the formation of catalysis induced sulfur plugs. A new invention provides an apparatus and method of desulfurizing LPG that minimizes catalysis induced sulfur plugging in the process of removing sulfur from a LPG stream.

What Is a Crack?

A crack, short for cracked, is a method to modify the executable or different types of files of an application.

After an activation or crack, it becomes possible to bypass the protections when activating the program and use the program to its fullest. You will be required to make sure that all the files are original and not modified in any way (edit marks, etc.) and not copied from other people, so they can be recognized as genuine. Unfortunately, the crack needs the original files to work. We know, some of you do not like pirated content, but we would like to remind you that the good guys, the reputable developers, do not allow cracking.

The First Program Is From DOS:

What is Direct Porting?

Directly, “Porting” means using an application that was made in another system (DOS, Win98, WinME, etc.), in the process, hacking and finding a way to emulate a DirectX (Win9x environment), OpenGL (Macintosh environment), etc.

Any program that was written in C++ or C is this type of program
